**Fusion Middleware Digital Solutions Forum**
March 11, 2015

Please join Oracle & 3Di on Wednesday, March 11th for our first Public Sector Oracle Fusion Middleware (OFMW) Digital Solutions Forum in Reston.

- Do you have legacy systems that need to be upgraded or replaced and/or integrated into a modern infrastructure and architecture?
- Do you have business processes that need to be automated, but modeling the processes with business users, incremental development of complex role based applications that can be flexible enough to accommodate future process changes seem out of reach?
- Do have a strategy for a customer self-service portal for your end users and internal users? How do you capture and retain users through a seamless user experience?
- Do you stay up at night thinking about how to provide simple federated identity management to your users while managing security of your systems, including your growing mobile users?
- Do you have or are you thinking about a mobile strategy but do not know where to start?
- Are you thinking about how you can take advantage of cloud-based solutions?

YOU ARE NOT ALONE!

This new Digital Solutions Forum is designed for you. In this first event we will NOT talk to you about the Oracle Fusion Middleware products. Through case studies and live demonstrations, 3Di and Oracle will present how customers like you have successfully addressed these questions using Oracle Fusion Middleware products such as Business Process Management (BPM), WebCenter Portal, WebCenter Content, Identity Management (IDM), Service Oriented Architecture (SOA), Mobility Suite and Oracle Cloud.

We will answer your questions on how we can leverage our successes with other customers to help you develop your own successful strategies.

You will have the opportunity to network with others who also are thinking about these same issues and share your experiences.

AGENDA

- 09:00 – 09:30 Welcome / Registration / Introductions
- 09:30 – 10:30 An Overview of Successful Digital Solutions
- 10:30 – 11:00 User Experience (UX) driven approach for developing portal and mobile applications
